22nd Micronesian Islands Forum

MAY 01, 2017 ~ MAY 03, 2017 | GUAM

The Leaders called for the support of Micronesia Challenge Plus (MC+), which would fully integrate global and regional challenges, including Climate Change, Disaster Risk Management, and Invasive Species toward enhanced and holistic conservation measures and to move the 2020 commitments beyond 2020 and into the future. This will keep the MC in line with the revised and expanded UN Sustainable Development Goals.

2. Regional Invasive Species Council (RISC)

The Regional Invasive Species Council (RISC) reported on progress since the 21st MIF. RISC identified and discussed two major issues needing supporting action from the Leaders, and an additional two developments in the United States which needed to be brought to the attention of the Leaders. RISC also met with the MC SC to discuss ways that RISC can support the MC.

The first and most urgent issue is the need for regional coordination of invasive species activities in Micronesia, including implementation of the Regional Biosecurity Plan (RBP). RISC recommended the creation of a Regional Invasive Species Coordination Office to be staffed by a Regional Coordinator and to be housed in the Micronesia Center for a Sustainable Future (MCSF). The Regional Coordinator would be responsible to coordinate implementation of the RBP across the region, as well as to coordinate other activities and initiatives.

The second very urgent issue is the growing threat of the coconut rhinoceros beetle (CRB) to the region. CRB is devastating coconut trees in Guam, Palau, and other Pacific Islands. There is a high risk of their spread to other islands in Micronesia, and there is currently no effective control. A regional project is therefore urgently needed to develop an effective biological control for CRB.

RISC met with the MC SC to discuss ways that RISC can support the MC in their efforts to minimize the impacts of invasive species in terrestrial and marine conservation sites throughout the region as an integral component of effective conservation. Together, they identified the critical need to work together to establish baselines of invasive species in conservation sites. RISC will continue to assist the MC as they work to effectively conserve natural resources by protecting conservation sites from invasive species.

➤ Regional Coordination for Implementation of the Regional Biosecurity Plan (RBP)

The Leaders supported the establishment of a Regional Coordinator position in the to be established Regional Invasive Species Coordination Office housed in the MCSF. The Leaders committed themselves, through the MCSF, to provide initial funding support for the first two years to help ensure the effective implementation of the RBP.

➤ US Presidential Executive Order on Promoting Agriculture and Rural Prosperity in America

The Leaders signed a joint letter to the Secretary of the US Department of Agriculture (USDA) welcoming the Executive Order signed by President Donald Trump on April 25, 2017, listing accomplishments of the Micronesian Region in the battle against invasive species and outlining needs for further progress. The Leaders look forward to working closely with the USDA and the Interagency Task Force to promote rural agricultural opportunity, food security and rural prosperity in the islands of Micronesia.

➤ Regional biocontrol project for Coconut Rhinoceros Beetle (CRB)

In recognition of the urgent need for a Pacific-wide project to find an effective biological control agent for the CRB, the Leaders instructed RISC to seek financial support for such a project, to be conducted with partners at the University of Guam, the Secretariat of the Pacific Community, New Zealand, the USDA and others, as appropriate.

➤ RISC/MC SC cooperation – capacity building for baseline surveys

The Leaders recognized the value of the collaboration between RISC and the MC SC and the progress they have made toward integrating invasive species prevention and management into effective conservation. The Leaders support the plan for RISC to work with the MC Measures Working Group to develop a capacity-building project to enable all jurisdictions to conduct baseline surveys for invasive plants, including development of a regional MC invasive species database for use in planning and decision-making. The Leaders expect that this will
